Escribes un username, tambien lo anotas para que no lo olvides

3. Verificas

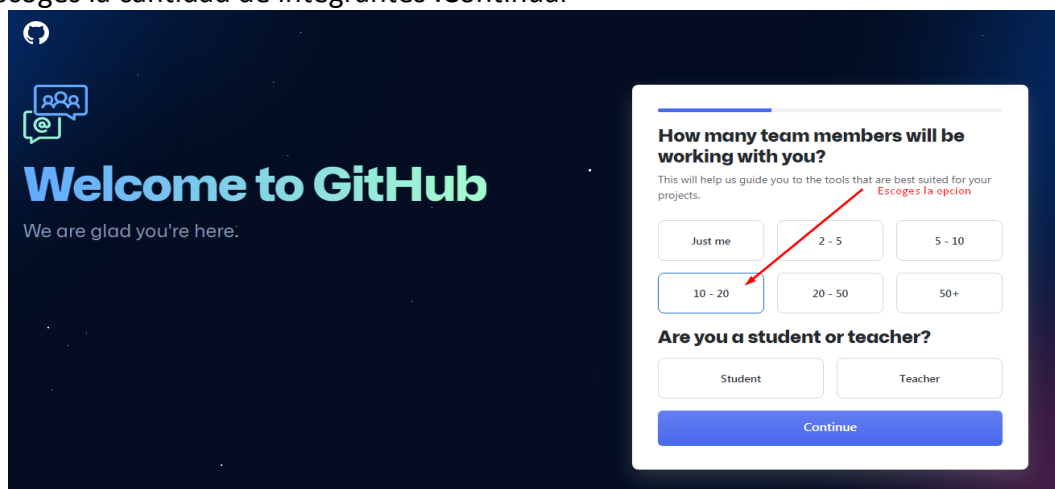

4. Creas la cuenta

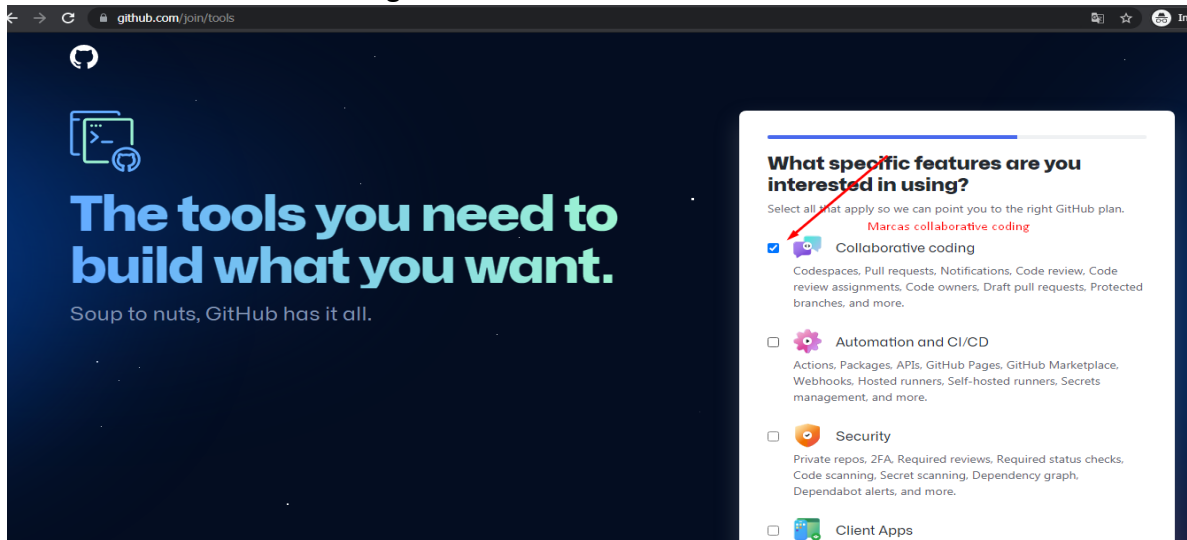

5. Verificas un código que te llega al correo y lo escribes.

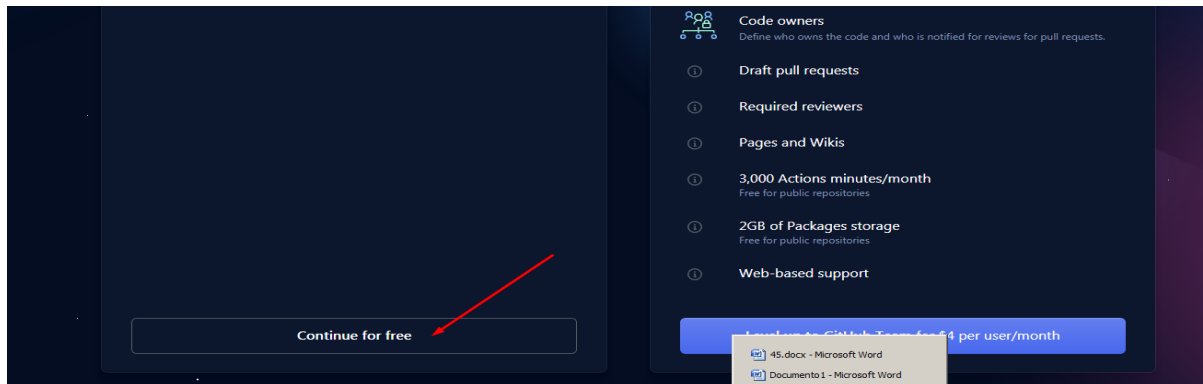

6. Escoges la cantidad de integrantes .Continuar

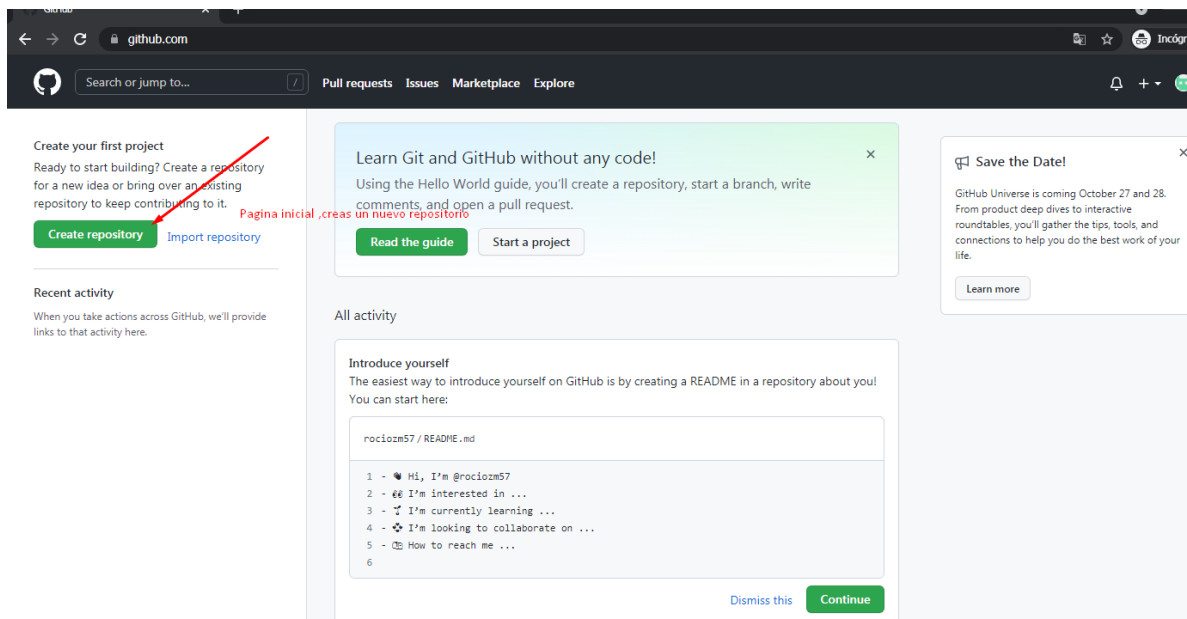

8. Marcas collaborative coding. Continuar

9. Continue for free.

10. Entrás a la página principal y le das crear nuevo repositorio

11. Creas el repositorio

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner *  rociozm57 / Repository name * Proyecto_G43 

Great repository names are short and memorable. Need inspiration? How about [supreme-guide?](#)

Description (optional) Primer proyecto ciclo 3

☒  **Public**  Anyone on the internet can see this repository. You choose who can commit.

☐  **Private** You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

☐ **Add a README file**
This is where you can write a long description for your project. [Learn more.](#)

☐ **Add .gitignore**
Choose which files not to track from a list of templates. [Learn more.](#)

☐ **Choose a license**
A license tells others what they can and can't do with your code. [Learn more.](#)

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH https://github.com/rociozm57/Proyecto_G43.git

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# Proyecto_G43" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/rociozm57/Proyecto_G43.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/rociozm57/Proyecto_G43.git
git branch -M main
git push -u origin main
```
